RE: visual aid SFS

---

Got it. Is it correct that the main difference between SF 3500 and SF 3000 is the removal of micro-organisms such as cysts and bacteria? The problem is that our city water utility does not supply 50 (or as in your visual aid 60) PSI to facilities it's somewhere between 35-45psi. New facilities have booster pumps to increase pressure but older schools do not. I need something that works at a lower PSI. The spec sheet for the SF 3000 still requires 40 psi.

Tiffany

See the attached visual aid for the various fountain system. You can see the middle version is what we are installing in your schools and has the slowest flow.

Give me a call on my cell to discuss if you like.
